

EMERGENCY CODE CALL-GATEWAY (RPCU-01/02)

RPCU-01 is the gateway for transmission of the text corresponding to the emergency code or any other text from the management center to the holders of wrist/waist pager units.
 RPCU-02 is the repeater unit to boost the signal when the facility has an architecture with obstacles for the 433 MHz signal of the gateway.
 Any code call launched from the 2-way pagers is passed to the main server using the same network of the gateways and vice versa.

Technical Specifications:

Weight	175 g		
Dimensions	W:202 mm	H:77 mm	D:45 mm
Raw Material	ABS		
Color	White		
Power Supply	5 V / 2 A		
Wireless Range	Max 200 meters depending on the architecture		
Port 1	Rj45		
Wireless Frequency	433 MHz		
Operating Temperature	-10°C ~ +50° C		
Operating Humidity	30% ~ 80% RH		
Mounting	Surface
