

SMART NCS- MANAGEMENT REPORTING S.W.(CUS-33)

CUS-33 is the management software connecting one or several management consoles to the management report displaying unit over IP via the legacy network of the facility. It can Record, Monitor and Analyze Call types, Staff Performance, Call Response Delay and Call Breaches for managers in any given time period. The reports can be in PDF format or column charts. It also provides the means to associate the RFID tags to the staff for reporting purposes. CUS-33 can also connect to LCD display units to both run as the facility signage system and show the calls in priority order and in corresponding colors (Red for critical, Yellow for emergency or Green for Normal) to alarm the staff away from the management console.

Technical Specifications:

Required Operating System	Windows 10/Server
Required H.D.D.	Min.120 GB
Required RAM	Min 4G
Required Hardware	Ethernet Port
Required Processor	Min Core i3 or equivalent
Centralized Database	MS SQL
