

**INFOTAINMENT SYSTEM- ALL-IN-ONE/MINI PC UNIT**

The information from the central server unit of the infotainment system is passed to the patient's console via either an ALL-in-One unit or a 10-inch LCD attached to a mini PC.

The Mini PCs are the end points connecting the main server to the 10-inch LCD displays. The user Interface side of the main Software is installed on the Mini PCs making it possible for the management staff to display the required information on the LCDs through these end points. Satellite/T.V. programs, Music, Educational programs, Patient's Particulars, Internet access, etc. are all passed to the 10-inch LCD from the server via the mini PC units.
